NIA BRANCH OFFICE CHANDIGARH

AI Tools for Office Productivity

Practical Applications of Artificial Intelligence with MS Office

One-Day Training Session
Faculty: CBITSS, Chandigarh

Session

14:30 – 17:30

Audience

Officials

Tools Covered

Word · Excel · PowerPoint · Email · AI Assistants . N8N

Made with GAMMA

FOUNDATION

What is Generative AI — and Why Should Care?

What is Generative AI?

Software that can produce human-quality text, summaries, drafts, and data insights in seconds — trained on vast amounts of written knowledge. Unlike a search engine, it generates new content based on your instructions.

LLMs in Simple Terms

Large Language Models (LLMs) are the engines behind tools like ChatGPT and Copilot. Think of them as an extremely well-read assistant who has absorbed millions of documents and can help you write, summarise, or analyse — instantly.

AI vs Traditional Software

Traditional software follows fixed rules and requires precise input. AI understands natural language, adapts to context, and handles ambiguous requests — making it usable without technical expertise.

AI as Assistant, Not Authority

AI augments officer judgment — it does not replace it. Final decisions, official communications, and procedural actions must always carry human review and accountability.

Made with GAMMA

MS WORD + AI

AI-Assisted Document Work in MS Word

Drafting Official Letters & Notices

Describe the purpose in plain language; AI produces a formally structured draft ready for review — headings, salutation, body, and closing included.

Summarising & Extracting Key Points

Paste a lengthy order, circular, or report and instruct AI to produce a concise summary or extract action items — saving hours of reading time.

Grammar, Tone & Clarity Improvement

AI reviews drafts for grammatical errors, passive voice overuse, and inconsistent tone — applying formal government-office language standards automatically.

Converting Notes into Structured Documents

Rough meeting notes, bullet points, or scattered observations become polished reports, meeting minutes, or office memoranda with a single prompt.

Made with GAMMA

MS EXCEL + AI

AI-Powered Data Work in MS Excel

AI dramatically reduces the time officers spend on routine data tasks — freeing capacity for analysis, decision-making, and action.

Data Cleaning

Identify and fix inconsistent formats, duplicate entries, missing values, and spelling errors in datasets using AI-suggested formulas or Copilot commands.

Formulas & Functions

Describe what you need in plain English — "calculate month-wise totals and percentage share" — and AI writes the correct formula, including complex nested functions.

Trends, Anomalies & Charts

AI scans tabular data to highlight outliers, seasonal patterns, and unusual figures — and can generate an appropriate chart type with labelling and a brief narrative insight.

Generating Plain-Language Insights

"Summarise this dataset in 5 bullet points for a senior officer" — AI converts numbers into an executive-ready narrative without manual interpretation.

Made with GAMMA

POWERPOINT · EMAIL · TOOLS

AI for Presentations, Email & Key Tools

AI + MS PowerPoint

Outline Generation

Convert a report or brief into a ready-to-use slide outline in seconds.

Speaker Notes

AI drafts talking points for each slide so presenters stay on message.

Executive Summaries

Condense a full deck into a 3-slide summary for senior leadership.

AI + Official Email

Professional Drafts

Compose formal, appropriately toned emails from bullet-point instructions.

Thread Summarisation

Paste a long email chain; receive a concise summary of decisions and action points.

Tone Adjustment

Switch drafts between formal, semi-formal, or simplified language instantly.

ChatGPT

General-purpose AI assistant for drafting, summarising, and brainstorming across any task.

Microsoft Copilot

Embedded in Microsoft 365 — works directly inside Word, Excel, PowerPoint, and Outlook.

Google Gemini

Integrated into Google Workspace; useful for document analysis and collaborative drafting.

OCR / Document AI

Scan physical documents into editable, searchable text — valuable for legacy paper records.

PROMPT ENGINEERING

Writing Effective Prompts: A Framework for Officers

The quality of AI output depends entirely on the quality of your instruction. Use this six-part framework to get consistently useful results from any AI tool.

Role

Tell AI what persona to adopt.
"Act as an administrative assistant..."

Task

State the exact action required.
"...draft a meeting-summary note..."

Context

Provide background and purpose.
"...based on the following discussion points..."

Constraints

Set boundaries on tone and length.
"...use formal government-office language..."

Output Format

Specify the structure of the response.
"...include Background, Key Discussions, Decisions, and Action Items."

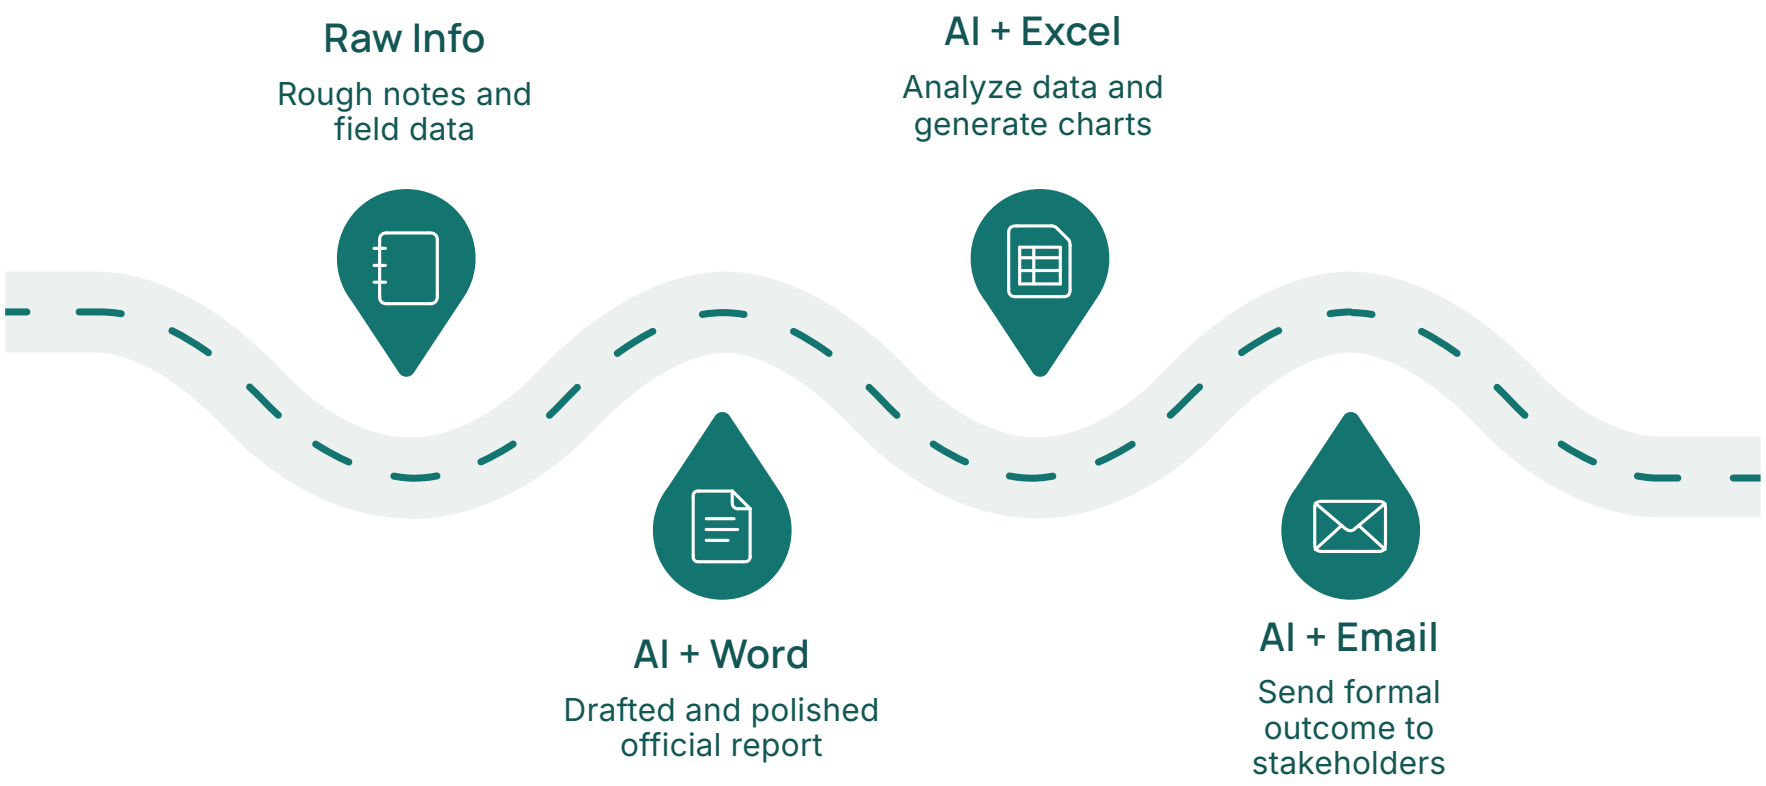

Example Prompt: "Act as an administrative assistant. Draft a concise official meeting-summary note based on the following points. Use formal government-office language. Include Background, Key Discussions, Decisions and Action Items."

PRACTICAL DEMONSTRATION

End-to-End Workflow: Raw Information → Official Output

This demonstration ties all tools together using one realistic office scenario — showing how AI accelerates each stage of the work without removing officer accountability.

Each stage uses a focused AI prompt. The officer reviews, refines, and approves every output before it moves forward — AI accelerates execution, but judgment remains human.

RESPONSIBLE AI USE

Secure & Responsible AI Usage — Especially for NIA Officers

Never Enter Sensitive or Classified Information

Public AI tools (ChatGPT, Gemini) send your input to external servers. Do not input confidential case data, personal identifiers, or restricted official information.

Verify Every AI-Generated Fact

AI can confidently produce incorrect statistics, dates, legal provisions, and procedural details. Independent verification is mandatory before any official use.

Human Review is Non-Negotiable

All official communications, orders, notices, and reports generated with AI assistance must be reviewed, edited, and approved by a responsible officer before dispatch.

Follow Organisational IT & Security Policies

Use only tools approved by your department. Comply with NIA and Government of India guidelines on data handling, cloud services, and official information security.

Treat AI as an Assistant, Not an Authority

AI has no legal standing, no accountability, and no contextual wisdom about your specific situation. Your judgment, experience, and authority are irreplaceable.

Made with GAMMA

HANDS-ON ACTIVITY

Practical Exercise — Apply What You Have Learned

Work through the following six tasks using AI tools and MS Office applications. Each task builds on the previous one, replicating a real officer workflow.

1	**Official Letter**	Use AI to draft a formal letter from a set of rough notes provided by the trainer.	MS Word + Copilot / ChatGPT
2	**Document Summary**	Summarise a one-page circular into 5 concise bullet points for a senior officer.	MS Word + AI
3	**Dataset Analysis**	Clean and analyse a provided Excel dataset; write the formula to calculate totals and percentage share.	MS Excel + Copilot
4	**Chart & Insights**	Generate a bar chart from the dataset and produce a 3-sentence plain-language insight narrative.	MS Excel + AI
5	**PowerPoint Brief**	Convert the analysis findings into 3 PowerPoint slides with speaker notes.	MS PowerPoint + Copilot
6	**Email Communication**	Draft a formal email to stakeholders summarising the outcome and recommended action.	Outlook + AI

Work Smarter with AI — Verify, Refine, Decide

AI Saves Time

Drafting, summarising, analysing, and presenting — tasks that took hours can now take minutes. Use that time for deeper thinking, better decisions, and meaningful work.

But Your Judgment Leads

Every AI output is a first draft — not a final answer. Review it, correct it, and approve it. As an officer, you carry the authority and the accountability. AI does not.

Practice Makes Proficiency

The more you prompt, the better your results. Start with small tasks — a summary, a draft, a formula — and build confidence through daily use. Expertise follows practice.
