

Complete Image Slash Command Guide

A practical collection of prompt-style slash shortcuts for image generation, image editing, photography, cinematic looks, fitness content, social media, and creative visual direction.

Important: These are reusable prompt shortcuts created as a command-style organization system. They are not a claim that every command is an official built-in ChatGPT slash command.

Recommended Command Combinations

Command combination	Typical use
<code>/droneshot /cinematic /photorealistic</code>	Professional aerial-style cinematic shot with realistic detail.
<code>/gym /fitnesscinematic /dramaticlighting</code>	High-impact gym or fitness portrait with dramatic lighting.
<code>/portrait /editorial /softlight /bokeh</code>	Clean editorial portrait with soft light and background separation.
<code>/streetphotography /night /neon /cinematic</code>	Night street photography with cinematic neon atmosphere.
<code>/fashion /luxuryfashion /studio /photorealistic</code>	Premium fashion campaign look in a controlled studio.
<code>/instagram /reelcover /aesthetic /minimal</code>	Clean social-media cover optimized for an aesthetic visual.
<code>/removebackground /enhance /upscale</code>	Clean background removal followed by image enhancement and upscaling.
<code>/changebackground /photorealistic /naturalLight</code>	Replace the background while keeping the subject visually realistic.

Example prompt format

`/droneshot /cinematic /gymcinematic /photorealistic`

Transform this gym mirror selfie into a realistic high-angle aerial-style shot. Preserve the subject's identity, body proportions, clothing, phone, gym equipment, and overall environment. Use natural perspective, realistic shadows, sharp details, and avoid artificial body changes or excessive smoothing.
